#### Cited documents:

D1: EP-A-0 416 430 (BASF AG) 13 March 1991 (1991-03-13)

D2: WO 00/75233 A (CREVECOEUR JEROEN JOOST ;KONING CORNELIS EME (NL); DSM NV (NL); KO) 14 December 2000 (2000-12-14)

D3: US-A-5 541 267 (AKKAPEDDI MURALI K ET AL) 30 July 1996 (1996-07-30)

D4: EP-A-0 498 977 (MITSUI DU PONT POLYCHEMICAL) 19 August 1992 (1992-08-19)

### 1. Novelty (Art. 33 (2) PCT)

The cited prior art document D1 discloses a flame retardant polyamide compound comprising a polyamide polymer, a polyamide oligomer, and a halogen-free phosphorous containing flame retardant as specified in detail in present independent main claim 1 (for relevant passages, see the corresponding International Search Report).

Consequently, said document D1 anticipates the subject matter of present claim 1.

The same considerations also relate to the additional features of the following claims 2 to 11 when taking into account the full disclosure of said document D1.

The considerations of the applicant as provided in his letter dated August 05, 2004 are not convincing for the following reasons:

Present document D1 on page 2, lines 29 to 33 discloses polyamids, which are

further specified in lines 3/4 of present independent main claim 1 as having a molecular weight range of " .... at least 5000 .... " (see D1, page 2, line 31). This range, however, clearly overlaps with the range of " ... at most 7500 ... " as claimed, such anticipating the polyamide oligomer component of said claim 1. Together with the full disclosure of said D1 as concerns especially the other components C and E (see D1, page 2, lines 5 to 8 and corresponding passages in subsequent text), the compositions of D1 are still fully covered by the very broad and general wording of present main claim 1.

As regards the feature of lines 4/5 of present main claim 1, according to which the claimed polyamide oligomer is melt-processable and semicrystalline or amorphous, the attention of the applicant is drawn to the fact, that this feature is implicitly disclosed by said document D1. Implicit disclosure corresponds to the fact, that the claimed product is regarded as being anticipated actually by said prior art document D1, even if the claimed parameters as specified in the lines 4/5 of present main claim 1 are not expressly mentioned therein, i.e., the parameters are regarded as being actually present in the prior art embodiments, but simply not determined and/or mentioned expressly.

Actually, it appears to be clear and self-evident for any average person skilled in the art, that polyamides in general are melt-processable, on the one hand, and that they are either semicrystalline or amorphous, on the other hand. Therefore, said feature is not capable of rendering present main claim 1 novel over D1.

To sum up, the examiner still feels unable to identify any technical feature of present claim 1, which is not fully anticipated by said prior art document D1.

Therefore the subject matter of present application is not new in view of the disclosure of cited document D1.

## 2. Inventive Step (Art. 33 (3) PCT)

Providing an amended main claim which meets the requirements of Art. 33 (2) PCT, the applicant in the European regional phase, if any, should relate the distinguishing feature to a surprising (unexpected) technical effect or make credible or plausible that the distinguishing feature is not derivable from the prior art teaching (Art. 33 (3) PCT).

NR. 3963

Enclosure to letter dated 05 August 2004 concerning European Patent Appln. No. PCT/NL03/00874; -DSM IP Assets B.V.-; ref. 21433WO.

#### AMENDED CLAIMS

- 1. Flame retardant polyamide compound comprising a polyamide polymer having a weight-average molecular weight of at least 10.000 g/mol, a halogen-free flame retardant and a polyamide oligomer having a weight-average molecular weight of at most 7500, and wherein the polyamide oligomer is a melt-processable semi-crystalline or amorphous polyamide, characterized in that the halogen-free flame retardant is a halogen-free phosphorous containing flame retardant.
- Compound according to claim 1, wherein the polyamide oligomer is a polyamide with a melting temperature of at least 260°C.
- Compound according to claim 1 or 2, wherein the polyamide oligomer is present in an amount of 0.1-30 weight %, relative to the total weight of polyamide.
- Compound according to any of claims 1-3, wherein the halogen-free phosphorous containing flame retardant is a melamine based phosphorous compound.
- Compound according to any of claims 1-4, wherein phosphorous containing flame retardant is present in an amount between 1 and 100 parts by weight, relative to a total amount of polyamide of 100 parts by weight.
- Process for preparing a compound according to any of claims 1-5 comprising meltmixing of a polyamide composition comprising a polyamide polymer having a weight-average molecular weight of at least 10.000 g/mol, a polyamide oligomer having a weight-average molecular weight of at most 7500, and a halogen-free phosphorous containing flame retardant.
- 7. Process according to claim 6, wherein the polyamide polymer is a polyamide with a melting temperature of at least 260°C.
- 8. Process according to any of claims 6-7, wherein the polyamide oligomer has a melting temperature of at most 20°C above the melting temperature of the polyamide polymer.
- Process according to any of claims 1-5, wherein the polyamide compound comprises a reinforcing component.
- Use of a polyamide compound according to any of claims 1-6 for the preparation of a molded part.
- 11. Molded part obtainable by melt-processing of a polyamide compound according to any of claims 1-6.
